

Energy transformations show and tell

 **Power Smart** for Schools

Hi,

We're having fun learning about the different forms of energy (electrical, light, chemical, sound, etc.) and talking about how energy can be transformed. Today I showed the class some devices that change energy from one form to another. Ask about the energy inputs and outputs of the devices we looked at!

I've asked the students to bring something from home that shows an example of an energy transformation (e.g. flashlight, elastic band, bell, toy car). Please give them a hand finding something they can bring to school and see if they can name the energy input and output of the item.

Let me know if you have any questions.

Thank you,

BCH18-652

Energy transformations show and tell

 **Power Smart** for Schools

Hi,

We're having fun learning about the different forms of energy (electrical, light, chemical, sound, etc.) and talking about how energy can be transformed. Today I showed the class some devices that change energy from one form to another. Ask about the energy inputs and outputs of the devices we looked at!

I've asked the students to bring something from home that shows an example of an energy transformation (e.g. flashlight, elastic band, bell, toy car). Please give them a hand finding something they can bring to school and see if they can name the energy input and output of the item.
