

Energize your summer with free home-friendly learning activities

HI GROWN UPS,

During the school year, Power Smart for Schools hosts hundreds of free classroom activities, helping teachers energize their curriculum on the topics of electricity, energy, safety, conservation, sustainability, and innovation. But why stop there? This summer we want to continue to spark curiosity at home with a website takeover featuring all of our favourite **home-friendly** activities for you and your kids to try out over Summer Break. These have all been labelled and unlocked for anyone to try!

Our activities include:

- The grade(s) they were designed for
- Type of activity (hands-on, thought-starter, game, etc.)
- Duration
- Materials needed
- Clear instructions with modifications and extensions
- Teachers notes for more context

WHAT TO EXPECT

When you land on our site, schools.bchydro.com, you'll see that we've put together some of our favourite activities right on the home page, as well as curated collections for rainy days, exploring outdoors, experimenting, and learning with friends. We have a featured blog post containing more information about this initiative as well as instructions on how to **complete our Summer Activity Passport and claim a swag pack for your child**. And if you're unsure about using teacher resources in your home this summer, we're here to help! There are some frequently asked question cards and a link to contact us, too.

We look forward to being a part of your summer.

Warmly,
Nicole, Ben and Ceanna
Power Smart for Schools Team
